- E). Overview of the restrictions on the transfer of funds and regulatory capital within Group companies
- There is no specific restriction set forth regarding the transfer of funds and regulatory capital within Group companies.

2. Overview of Capital Adequacy Assessment Methods

The Group sets forth “The Rules of Economic Capital Management” and “The Rules of Regulatory Capital Management”, and assesses capital adequacy from economic capital as well as regulatory capital point of views.

<Economic Capital>

The Group sets economic capital allocation amount after reserving capital buffer adequately resists financial stress under Tier 1 capital, and accordingly allocates such capital toward major Group companies.

In assessing the capital adequacy, the Group monitors capital requirements based on the aggregated level of each Group company against the economic capital allocated to them.

Economic capital allocated toward major companies is set with reflecting historical risk amount, business plans, budget, and others. Capital adequacy is assessed by confirming and quantifying if the risk amount held by the Group companies as a result of their business activities falls within the range of allocated capital.

<Regulatory Capital>

The Group monitors regulatory capital against the alert level which is set well above the minimum regulatory capital ratio.

3. Credit Risk

- A). Overview of risk management policies and procedures

<Credit Risk Management Policy >

In regard to transactions that involve exposure to credit risk, before the transaction is made, the Group assigns the counterparty a credit limit based on its credit rating. Subsequently, the Group carefully monitors the notional amount and the credit equivalent amount. In particular, in the wholesale business where the exposure to credit risk is comparatively high, the Group assigns credit limit based on the probability of failure of each counterparty and expected recovery rate of the transaction. The probability of failure is estimated via internal model and expected recovery rate is from the transaction conditions such as the maturity, collaterals and legal enforceability of the agreement. In addition, the Group measures and periodically monitors credit VaR at the portfolio level.

<Allowance for Doubtful Account>

In order to prepare for the loss from bad debts on loan and others, allowance for doubtful accounts are provided for probable losses on loans and receivables, based on the actual historical default rate for normal claims, and based on individually assessed amounts for doubtful and default loans.

<Calculation of Credit Risk Asset>

Credit risk exposures are being calculated in the standardized approach

- B). The Name of the external credit assessment institutions (hereunder ECAIs) used when determining the risk weight

Following ECAIs are used to determine the risk weight

- Rating & Investment Information, Inc.
- Japan Credit Rating Agency, Ltd.
- Moody's Investors Service, Inc.
- Standard & Poor's Rating Services

4. Overview of Policy and Procedure for the Credit Risk Mitigation Techniques

Collateral is used for the Credit Risk Mitigation Techniques (hereunder CRM Techniques).

Types of collaterals are generally cash or high liquid securities. Received collateral is valued mark to market daily and monitored against exposures. In addition, balance and type of collaterals taken are also subject to the monitoring.

For derivative and repo transactions, bilateral netting agreements are generally set. For transaction where legally enforceable bilateral netting arrangement exists, the CRM Techniques are applied.

The Group uses the Comprehensive Approach for the CRM Techniques.

5. Overview of Policies and Procedures for the Counterparty Credit Risk Management of Derivative and Long Settlement Transactions

For derivative transactions, credit review of counterparty is conducted in advance, and credit limit is assigned when the credit soundness is confirmed. Exposure amount and collateral value are calculated and compared daily; accordingly, collateral is pledged or accepted. Likewise, for long settlement transactions, credit review of counterparty is required and transaction can only be conducted if the credit limit is assigned.

Credit limits of the counterparty are reviewed periodically. In addition, for uncollateralized exposures, allowance amount is calculated based upon allowance percentage that is set in accordance with the Group's internal credit rating and maturity of transaction.

Risk capital is allocated based upon the credit VaR, and reviewed semiannually. Upon the time when own credit rating downgraded, additional collateral will be required. The Group carefully monitors the additional collateral amount and accordingly, such amount falls into the allowable level.

6. Securitization Exposures

A). Overview of risk management policies and characteristics of other risks

The Group is involved in securitization transactions as an investor, and accordingly holds securitization products under investment and trading accounts.

Outstanding exposures and credit soundness of securitization products are periodically monitored by independent risk control departments.

B). Overview of monitoring framework of the regulation set forth under the provision of Article 227 Paragraph 4(iii)-(vi) of the Consolidated Capital Adequacy Ratio Notification

Periodical monitoring of securitization exposures are being conducted in order to adequately grasp comprehensive risk characteristics of securitization exposures including risk characteristics of underlying asset, performance related information of underlying assets, and the scheme of the securitization transaction.

C). Policies when securitization transactions are used for CRM Techniques purpose

Not applicable.

D). Method of calculating credit risk asset

The standardized approach is used in order to calculate credit risk amount.

E). Method of calculating market risk amount

For general market risk, the internal model is used, for specific risk, the standardized approach is used.

- F). Engagement to the securitization transaction through Special Purpose Entity, if applied type of SPE and the exposure

7. Market Risk

A). Overview of risk management policies and procedures

Under the Group's trading position, with considering soundness in financial outstanding and business plan, and budget, limits on VaR, position, and sensitivity are set. The Group's Risk Management Department monitors market risk and accordingly reports to the managements daily.

Back testing is being conducted in order to verify accuracy of VaR model. In addition, so as to support VaR which have calculated based upon given time horizon and statistical hypothesis, stress test is conducted by applying historical and hypothetical stress events as a scenario.

B). Methods used for calculation of market risk

i. Internal models approach

General market risk for Daiwa Securities Co. Ltd., and foreign subsidiaries.

ii. Standardized approach

Specific risk

General market risk that is not included in above query "i"

C). The method in order to adequately evaluate price in accordance with characteristics of the product/ transaction, with recognizing the assumed holding period and the inability to close the positions within the period

The Group sets forth the policies and operational manual regarding valuation. The independent risk control department from the department which engages with trading businesses carefully analyzes and reviews the relevancy of value and valuation method, and such results are periodically reviewed by the external audit

D). Overview and the explanation of internal model and explanation of back-testing and stress test

The Group uses VaR as well as Stressed VaR in which indicates maximum potential loss under stress period. In addition, in order to test accuracy of VaR, the Group conducts back-testing so as to reconcile VaR against actual profit and loss. Likewise, stress test is conducted in order to grasp possible loss incurred as a result of historical and hypothetical stress events.

E). Overview of the model used when incremental risk is measured by internal model

Not applicable

F). Overview of the model used when comprehensive risk is measured by internal model

Not applicable

G). Assumptions and the methods in internal capital adequacy assessment of market risk

- Holding Period: 10 business days
- Observation Period: 520 business days
- Confidence Level: 99%

8. Operational Risk

A). Risk management policies and procedures

As the Group's business becomes more sophisticated, diversified, and systemized, the accompanying risks become more varied, and as a result the need to manage such operational risk grows each year. The Group's major subsidiary companies engage in RCSA (Risk Control Self Assessment) in compliance with operational risk management rule, and adequately manage operational risk. In addition, due to the diversifying nature of its business, the Group also sets rigid rules concerning authority, automates office work processes to reduce human error, prepares business manuals, and takes other necessary measures. Each Group company strives to reduce operational risk according to the nature of its own business.

B). Methods for the calculation of operational risk amount

The Basic Indicator Approach is used for the calculation of operational risk amount

9. Overview of Risk Management Policy and Procedure for Equity Exposure on Non Trading Accounts

In addition to trading businesses, the Group posess investment securities for investment as well as business relation purposes. Because those financial instruments have distinct risk profiles for each product, the Group conducts adequate credit as well as market risk managements including measurement of risk by the profile.

For the consolidated subsidiaries, the scopes of the risk management are assets and liabilities. For the affiliated companies, the scopes of the risk management are equity exposures. Those are subject to the risk management in each classification.

Also, marketable available-for-sale securities are stated at their fair values based on quoted market consolidated closing prices (the unrealized gain or loss is fully recognized, and the cost of products sold is mainly pursuant to moving average method). Non-marketable available-for-sale securities are carried at cost by moving average method.

10. Interest Rate Risk under Non Trading Accounts

A). Overview of risk management policies and procedures

In regard to non trading accounts of the Group, most interest rate risk arises from the assets and liabilities held by Daiwa Next Bank, Ltd.

Daiwa Next Bank, Ltd. complies with management rules of market risk and manages the risk of incurring losses from changes in the value of assets and liabilities or in the net incomes.

Middle and back offices, which are independent from front office, are set, and it acts as a system of checks and balances. In addition, the ALM committee is periodically held and discussed regarding the management and operation of market and liquidity risks as well as the management of assets, liabilities, and capital efficiencies.

B). Overview of management's method for measuring interest rate risk under non trading accounts

i. Financial assets and liabilities (exclude financial assets and liabilities held by subsidiaries engaged in the banking business)

Financial assets and liabilities that are resulted by interest rate risk are bonds and notes and long-term loans payable. The change in fair value is calculated under assumption of changes in interest rate for 10 basis points (0.1%).

ii. Financial assets and liabilities held by subsidiaries engaged in the banking business

For the financial assets and liabilities in the subsidiaries engaged in the banking business, market risk amount is measured in a change of economic value used the 99th percentile of observed interest rate changes using a year holding period and 5 years of observations. It is used for quantitative analysis to manage risk of change in an interest rate. For calculating the amount of changes, the balances of the financial assets and liabilities are classified in each period. The changes of interest rate in each period are applied. For those currency positions which consists less than 5% of gross asset or liability, upward and downward rate shocks of 200 basis points (2%) is uniformly applied in a parallel move, and changes are being calculated.

7. Market Risk

Internal models approach Value at Risk (VaR) Results

(Calculation Method)

Historical Simulation Method

Holding period: 10 business days and a 99% Confidence level

[March 2013]

(Unit: 1 Million Yen)

	VaR	Stress VaR
Amount of March 31,2013	5,067	11,937
Maximum	6,494	13,065
Average	3,713	7,664
Minimum	2,451	3,890

Excess number of back-testing	1time
-------------------------------	-------

Back-Testing

Comparing VaR for a one day holding period with daily profit and loss is conducted in order to verify accuracy of VaR model.

Excess number of back testing is a number of times that losses are exceeded VaR over a given holding period.

8. Equity Exposure on Non Trading Accounts
